MediCall
Project Organization Strategies

Haeryn Kim
Lizbeth Leapo
Deepthi Nacharaju

To work collaboratively on live documents, we initially used Google Drive to house all word documents and excel sheets. As these documents became fixed, we switched to another mode of project management. Now, all project material, including videos, PDFs, and sketches, are tracked via GitHub. All milestones, objectives, and their associated progress are organized with the project feature on GitHub using a Kanban board.

The MediCall folder is split into Cycle One, Cycle Two, Data, General, Mechanical, Presentations, and Problem Statement folders. All previous versions have been committed and can be found in the Git history.
